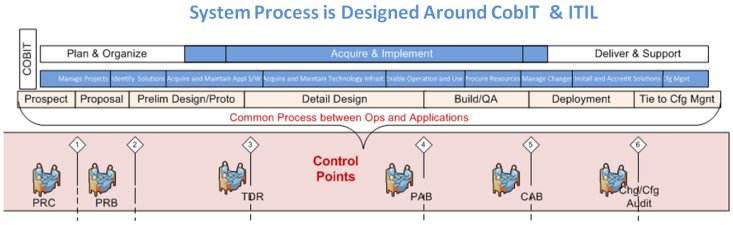
FREE-Open Source

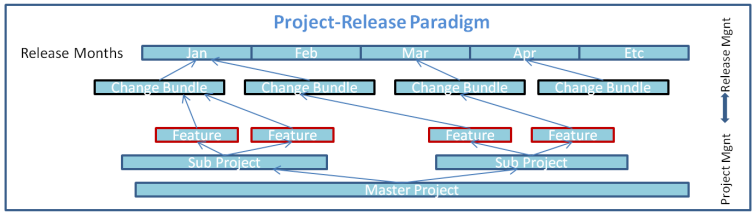
by CIO Services, LLC

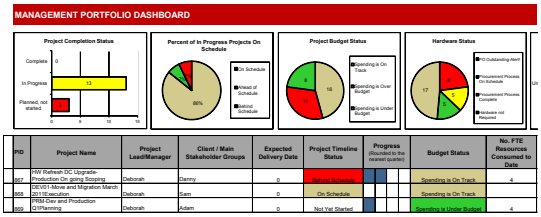
Project, Application & Infrastructure Portfolio Management for IT Organizations requires integration between your PMO, Development and Operations groups, with one view of the project lifecycle. PPM *Litecycle* provides PPM and Application Lifecycle Management (ALM) in an integrated, non-complicated, non-bureaucratic process.

To remove the walls between business stakeholders, development teams, project managers, and the PMO, PPM *Litecycle* broadens the capabilities of a PPM system to include ALM elements, while at the same time lightens the burden of deep data entry such as excessively-detailed task and time tracking.

The Business/IT need core features that focus on planning, tracking, and reporting while providing easier access to critical metadata needed to achieve their goals. PPM *Litecycle* provides the glue between operational and strategic systems through an integrated/integrating platform to achieve the Business Project Objectives.





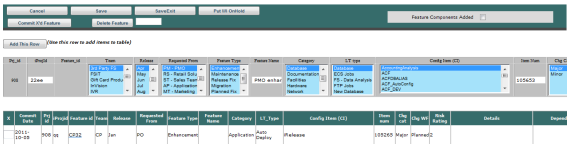


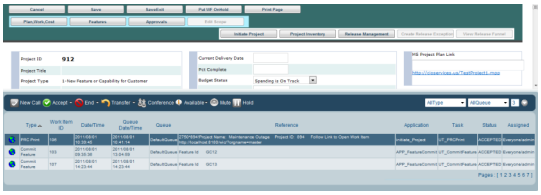
PPM

- Project requests, planning, requirements, tasks, scheduling
- Governance – management review and approval across the project *Litecycle*
- Triple constraints visibility – Time, Cost, Scope
- Executive and operational dashboards
- Width vs. depth – more, simpler information vs. complicated details
- Integration with other project management systems (e.g. Microsoft Project)
- Webservice tie to Document Management System – (e.g. Knowledge Tree)

ALM

- Project to Feature hierarchy (Application or Infrastructure components)
- Governance at the Feature level across the *Litecycle*
- Feature links to tasks in an ITSM system – (e.g. webservices to Livetime, Mojo)
- Risk, Test and Deployment plans at the Feature level
- Grouping of approved Features into a Releases and Release bundle
- Change Management with Automatic Change Document creation
- Configuration Items Management by Features (with webservice to Livetime)



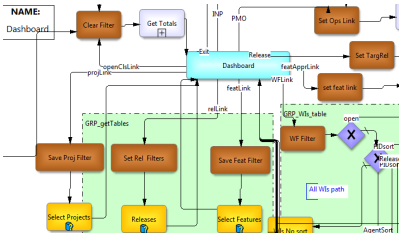


Workflow & Collaboration

- Flexible, but controlled workflow based on Cobit and ITIL across the *Litecycle*
- Workflow portal with split view, work-items/application
- Integrated email and work item alerts
- Multiple organizations, queues, teams, roles; with skills and workload routing

Technology & Integration

- Built on open source stack, Java, JBoss, MySQL, Eclipse, Starpound
- Visual development of business process and application (Starpound Studio)
- Plug and Play web services (currently to Livetime, Mojo, Knowledgetree, Sharepoint, Jira)
- Easily maintainable in-house
- SasS in the Cloud is available
- Easy Telephony integration- PBX, Call Center, IVR – through Starpound



PPM *Litecycle* is a light end-to-end solution for project, application and infrastructure management; incorporating key aspects of both PPM and ALM applications. Features are rich, but not burdensome for the business to utilize. Governance processes are built-in. Built on open-source technology, with visual development and easily customizable workflow.
