

PPM Litecycle™ Whitepaper

SaaS or FREE-Open Source

Want a FREE IT project lifecycle governance application AND FREE full scope ERP application? -]Project Open[& PPM Litecycle™

Does your organization, business and IT, want to implement this easily via the cloud?

Are you an agile organization that doesn't want to be slaves to a bureaucratic system/process?

The problem with current project server, ERP and PPM systems are:

- They take too long to implement
- They are not integrated, leaving holes or duplication for users
- If they are an integrated system they are extremely demanding and structured
- A project paradigm is not carried across as the basis for work of any kind in the organization

Consider the following approach to a solution

- Implement a high level project overview system that provides management visibility through dashboards of all project vital statistics – From PPM type portfolio review and approval information – To Release, Change, Deployment and Configuration Management information – and non-bureaucratic stage gates throughout
- Integrate this high level application with a full function ERP system such that deeper, vertical detail can be linked, manipulated, analyzed and monetized (as necessary) by all the functional areas such as Financial, HR, Project Management and other typical ERP functions. The project core paradigm is maintained while “translation” to utilize more traditional “silo-fluent” processes is made (e.g. AR, AP, Ledger, HR, Resources, and Reporting).
- Allow for a project- subproject-task hierarchy for consolidations or, not, into master initiatives roll-ups.
- Provide for direct import of projects/tasks from PC-based applications such as Microsoft Project Professional, and the organizations ITSM or “ticketing system” such that individual preference is maintained
- Access the system from “the cloud” using Amazon Web Services offerings

At CIO Services, LLC (<http://cioservices.us>) we have done just that with our integration between our PPM Litecycle™ and the open source ERP system,]Project Open[. Both systems are built entirely on open source platforms and the applications are FREE.

At CIO Services, LLC we are in the business of getting your organization up and running on this software on your own instances of Amazon EC2 (Managed by us if you want) and providing any process and governance consulting you may need to perform.

For a free, no signup, no obligation trial of this application you can go to <https://ppmlitecycle-app.com>.
